KUHN AXIS 25 Precision Fertilizer Spreader

KUHN North America, Inc., is pleased to introduce the new Axis 25 precision fertilizer spreader. The Axis® 25 is engineered to help growers maximize nutrient efficiency, increase productivity and fully leverage modern precision farming practices. As a modernized mounted spreader, it combines innovative technology, high-capacity performance and wide-area coverage to deliver exceptional efficiency in daily operation.

At the heart of the Axis 25 is KUHN's exclusive CDA (Coaxial Distribution Adjustment) technology, which maintains the optimal fertilizer drop point regardless of changes in travel speed, application rate or working width. This ensures a consistent spread pattern and uniform nutrient distribution, even at industry-leading application rates of up to 1,488 lbs./min. (675 kg/min.). New high-performance spreading discs provide working widths up to 140 ft. (42 m), including up to 120 ft. (36 m) with urea, without requiring disc adjustments, helping operators cover more acres in less time while maintaining spreading accuracy across a wide range of fertilizer products.

Designed for today's precision farming operations, the Axis 25 features advanced technologies such as VariSpread 18 section control, Variable Rate Application, OptiPoint headland management and SpeedServo metering to optimize every pass, reduce overlap and improve fertilizer efficiency. Full ISOBUS compatibility allows seamless integration with existing in-cab terminals for simplified machine control, application mapping and documentation.

The Axis 25 is also built for long-term reliability and maximum uptime. Its patented maintenance-free mechanical drive system eliminates the complexity of hydraulic or electronic disc drives while providing dependable power transfer, built-in overload protection and protected gearboxes operating in sealed oil and grease baths. Combined with a durable double powder-coated finish that resists mechanical stress, UV exposure, salts and acids, the Axis 25 delivers commercial-grade durability and years of dependable performance.

Together, these features help growers reduce input costs, improve application accuracy and achieve a greater return on every acre. This precision fertilizer spreader is now available through authorized KUHN dealers across North America. To locate a dealer or learn more about the Axis 25 precision fertilizer spreader, visit www.kuhn.com.

Kuhn North America, Inc., of Brodhead, Wisconsin, is a leading innovator in agricultural and industrial equipment. KUHN offers a broad range of hay and forage, livestock, and crop production tools, as well as landscape and road maintenance equipment. KUHN, KUHN Knight and KUHN Krause products are sold by farm equipment dealers throughout the United States, Canada and many other countries.
